

March 2014

ClimatePartner is a leading business solutions provider for climate protection and supports companies across all sectors in creating growth potential through voluntary climate protection. ClimatePartner works with more than 1,000 large, medium, and small enterprise partners around the world to develop climate protection solutions.

The international climate protection specialist is certified by Austria's technical inspection authority (TÜV) as a provider of IT system solutions for efficient carbon management, including carbon balancing and offsetting. ClimatePartner makes it possible for clients to integrate climate protection solutions into their value chain with a high degree of automation -including "climate protection at the push of a button". This has the effect that voluntary climate protection becomes a part of how companies operate, how services are provided, and how products are manufactured, transported, and marketed.

The company was founded in 2006 with headquarters in Munich and operates with an additional office in Berlin since 2013. It has subsidiaries in Austria and Switzerland, as well as partners in Armenia, Greece, Japan, and the USA. ClimatePartner collaborates closely with environmental associations and provides experts for various international committees.
