Carbon Offsets

Carbon Offset Services with **ClimatePartner**

ClimatePartner Offset Services:

Carbon offsetting for your company and your customers

By offsetting greenhouse gas emissions, you can offer climate neutral products and services while supporting internationally recognized carbon offset projects. ClimatePartner Offset Services deliver the full service spectrum of carbon offsetting – flexibly, transparently and on-demand.

In addition to long-term emissions reduction, carbon offsetting provides companies with the chance to become proactive in climate protection immediately. Your opportunities: reinforce your company's environmental message, diversify your portfolio with climate neutral products to stand out among the competition, and offer your customers added value with climate neutral services.

Carbon offset projects save greenhouse gas emissions or avoid the production of additional emissions with projects such as building a wind power system instead of a coal power plant. Internationally recognized standards are used to verify the carbon savings and provide transparency. The market mechanism for emission trading originates in the Kyoto Protocol and the Clean Development Mechanism (CDM) defined therein.

With ClimatePartner Offset Services, you can manage all of your offset orders effortlessly and efficiently via an online platform. In addition, you can execute the carbon offset directly in your company's own software and even integrate it into online shops for your customers using an IT interface we provide. All processes are certified by the Austrian technical inspection authority, TÜV Austria.

Emissions are offset using certificates from carbon offset projects that directly reduce greenhouse gas emissions. The emissions reductions from these projects have been verified. They are regularly audited by independent organizations and fulfill the highest internationally recognized standards. Our portfolio spans various technologies: from wind power and hydropower to forest conservation, biomass, and geothermal projects.

Carbon Offsetting On-Demand

On-demand means that you offset the exact volume of carbon emissions generated by your products, services, and business activities when needed. Offsetting is transaction-specific and available at any time – which means that offsetting carbon emissions becomes an integral component of your business processes.

No capital tied up

The carbon emissions are offset „just in time“ – your company is freed from exposure to financial risk because the emissions certificates are tailored to match your specific circumstances.

Sample project

Forest conservation: Kasigau Wildlife Corridor, Kenya

The Kasigau Forest Conservation Project in Kenya protects existing dry forest and savanna, covering an area of approx. 170,000 ha. It prevents deforestation as well as slashing and burning, thereby ensuring carbon sequestration.

Offset for any volume

From the smallest volumes below 1 kg to large orders exceeding 100,000 tons of CO₂ and more – with ClimatePartner, there are no minimum quantities or volume restrictions.

Your customers benefit

With ClimatePartner Offset Services, it's easy to render products and services climate neutral – or to offer a climate neutral option as a high quality service.

Comprehensive Product Portfolio

More than 20 internationally recognized carbon offset projects are available. They all fulfill highest standards and feature different technologies so you can select the project that best matches your company.

Full price flexibility

We have carbon offset projects covering all price categories, enabling your company to help protect the environment, regardless of its budget.

Sample project

Biomass: Ceará, Brazil

The carbon offset project in the Brazilian state of Ceará covers five brick production plants that use agricultural waste and sustainably produced biomass for firing. The project has Gold Standard certification, saving a total of some 390,000 tons of carbon emissions.

Individualized consulting

We provide consultation for selecting the carbon offset project that is right for you. With access to more than 100 internationally recognized carbon offset projects all over the globe, we can provide you with the right project to match your needs on short-term notice. Upon request, we'll work with you to develop your own carbon offset project to match your investment focus.

Effortless, Efficient Offset Management

Our online solution enables you to manage all of your company's offsetting activities effortlessly and efficiently, as well as those of your clients. The entire portfolio of carbon offset projects is available for every order. All processes are certified by TÜV Austria.

Sample project

Hydropower: Renun, Indonesia

This project involves a new run-of-the-river plant with two turbines utilizing natural variations in height to harvest energy. This makes it possible to save 230,000 tons of carbon emissions annually. In addition to supplying power, the project also creates local jobs.

Comprehensive reporting options

With our online solution, you'll always have an overview of all offsetting activities, from information on your customer orders and the carbon offset projects supported to exact figures on the carbon volumes for each individual order. Additionally, there are export functions available for your emissions reporting.

Certificate No. TA 290 102005531
www.tuv.at

IT integration

In addition to an online solution for carbon offsetting, we'll provide a cloud-based IT interface facilitating integration into the booking process on your website or implementation in your company's ERP systems, to name just two examples.

Upon request, we'll calculate the carbon footprints of your company, your products, and your services. Moreover, as a provider of outsourced services, we can handle all carbon offset management for your company.

Transparency for Customers, Business Partners and Investors

Transparency is critical to success in voluntary climate protection. Customers and business partners need an uncomplicated method for recognizing whether the product or service they are obtaining is climate neutral. Transparency is an integral part to ClimatePartner Offset Services and is automatically part of every offset order.

Communication via online ID tracking

Our software automatically generates a unique ID number specific to each carbon offset order. This ID can be used to access all information relevant to a carbon offset order: documentation on the carbon offset project being supported, the purpose of the carbon offset, and even the carbon footprint of the climate neutral product or service.

Sample project

Wind energy: Bandirma, Turkey

This Gold Standard project consists of five wind energy systems with a total output of 15 MW. Around 31,000 tons of CO₂ are saved annually. This project contributes to developing Turkey's wind energy sector and bears no negative effects for the environment. The land surrounding the project is used as grazing land.

Individual labels and certificates provided

We provide you with certificates and labels for your products and services that can be integrated into your customer communication with ease – both online and offline. All information relevant to the carbon offset activities can be retrieved online by entering the associated ID number on your website, at www.climatepartner.com, or via QR code.

About ClimatePartner

ClimatePartner is a leading business solutions provider for climate protection and supports companies across all sectors in creating growth potential through voluntary climate protection. The international climate protection specialist is certified by Austria's technical inspection authority (TÜV) as a provider of IT system solutions for efficient carbon management, including carbon balancing and offsetting. ClimatePartner makes it possible for clients to fully and efficiently integrate climate protection solutions into their value chain.

ClimatePartner is an official consulting partner of the CDP initiative for SMEs.
